| Relation to PED:<br>Point 4.2 (c) of Annex I | <b>CABF Recommendation</b>                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Question:</b>                             | Is a particular appraisal of a PMA by a notified body required for pressure equipment in category III as it is stated in point 4.2 (c) of Annex I even if the manufacturer has an approved quality system for design, manufacture, final inspection and testing according to module H?                                                                                                                            |
| <b>Answer:</b>                               | Yes                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Reason:</b>                               | <p>The Pressure Equipment Directive in point 4.2 (c) of Annex I stipulates clearly that the PMA for pressure equipment in categories III and IV must be approved by the notified body in charge of the conformity assessment procedure.</p> <p>In case of module H the PMA for pressure equipment in category III must be approved by the notified body responsible for the assessment of the quality system.</p> |
